

## BI-FOLDING DOORS

Folding doors open up entire walls, seamlessly bringing the outside in, creating vistas and allowing light and fresh air inside. Bifold doors stack to the sides, and have no posts or fixed door panels to block views or breezes.

The hardware system that moves your bi-fold doors is as important as the doors themselves. Choosing Centor means your folding doors will move with the best.

Centor systems are reliable, secure and weatherproof, offer fingertip operation and complete design freedom.

## SLIDING HARDWARE SYSTEMS

Centor has been known for creating the finest sliding door hardware available since 1951. Sliding door systems from Centor are reliable, versatile and offer fingertip operation.

Decades in the field, robust materials and a 10-year warranty ensure your Centor sliding system will operate smoothly and reliably for many years to come.

With the capacity to carry doors up to 400 kg there is a Centor sliding door system for every application.

## INSECT SCREENS

The problem of screening large openings is solved with Centor's range of retractable insect screens.

Centor's screens for bi-fold-scale openings unobtrusively protect against insects, disappear when not in use, and are a breeze to operate.

Centor has a screening solution for just about any window or door type, including bi-folding and sliding doors.

Centor screens are unobtrusive, robust and versatile, offer fingertip operation, and are the best solution for screening large openings.

## RETRACTABLE BLINDS

Centor's retractable blinds combine privacy, thermal insulation and UV protection with an unobtrusive design and smooth operation. Choosing a light fabric also allows the blind to double as a projection screen.

The retractable system can combine a blind and insect screen in a single unit, to help you control light, temperature, privacy and insects in your home at all times.

This versatile and robust system operates with just a fingertip, and is a green solution as it can improve your home's thermal performance.
